Re: Lot Numbering System; S-Carb® Super Sacks

Dear Valued Customer:

The following is a description of the lot numbering system used by Genesis Alkali at its Green River facility for S-Carb® product, packaged in super sacks.

Lot code = Date in MM-DD-YY format. For example: A lot code of 01-29-17 represents product packaged on January 29, 2017.

This identifier is clearly marked with the words “Lot Number” preceding the code. A batch number is also provided on each sack label. The batch number is an internal Genesis number used in production and marketing tracking. There is no customer usable information built into it.

As each sack is filled, a label is placed in the sack’s transparent label pouch. The printed information contains product name, lot and batch coding, hazard and precaution statements, and place of manufacture.

Please contact me if you have any questions.

Sincerely,

A handwritten signature in black ink that reads 'Michael Kemmerer'.
