Re: Genesis Alkali Pesticide Residue Statement- Sodium Bicarbonate

Dear Valued Customer:

Genesis affirms that our product, sodium bicarbonate (all grades), is protected from contamination by not allowing chemical pesticides to be used or stored in the sodium bicarbonate production area. Pests are controlled using the following methods:

1. Live traps are used for rodents. These are placed approximately 10 feet from each side of each outside entrance and in other designated locations within the plant and warehouse.
2. Flying insect traps and screens are installed in both the warehouse and process building, adjacent to outside entrances, and in the highest part of the production building.

Our sodium bicarbonate products are not tested for pesticide residue. Due to the absence of pesticide use in and around our manufacturing areas we do not believe that pesticide residues would be present in our final sodium bicarbonate products.

Please contact me if you have any questions.

Sincerely,

A handwritten signature in cursive script that reads 'Michael Kemmerer'.
