Re: **Genesis Alkali Sodium Bicarbonate Product Screening Statement**

Dear Valued Customer:

Genesis affirms that our product, Sodium Bicarbonate (all grades), is protected from contamination by the following screening methods:

1. Product is screened as a final production step, just prior to packaging. While screening materials are selected primarily to meet product particle size requirements, they are also effective at removing any materials which may have inadvertently entered the process. Materials caught on the screens do not re-enter the production stream.
2. Rare earth magnets (preventive controls) are installed in the transfer lines to bulk loading and to the packaging bins and will remove magnetic particles.
3. A metal detector screens all bagged materials and is tested each shift with a 1.8mm ferrous piece.

Please contact me if you have any questions.

Sincerely,

Michael Kemmerer  
Regulatory/QA Manager
