Re: Shelf Life of S-Carb®

Dear Valued Customer:

With regard to the shelf life of Genesis Alkali S-Carb®, this product is chemically stable in prolonged storage as long as reasonable care is taken during storage, such as keeping it in a cool environment with lower than 50% relative humidity (RH) and away from potential contaminants. Genesis has set a re-test date of 3-Years from the manufacturing date on the package.

For best results with product flow-ability, Genesis recommends that attention be given to storage of bagged S-Carb®. Ideal storage conditions (cool and dry at less than 50% RH) with pallets stacked two high or less will significantly increase the time before product flow-ability may diminish. Please use your oldest stock first to assure the same high quality that is shipped to you is available at the time of product use.

Please contact me if you have any questions.

Sincerely,

A handwritten signature in cursive script that reads 'Michael Kemmerer'.
