Genesis Alkali operates a multi-faceted mining and production facility in Green River, Wyoming, supplying some of the best-known products used around the globe. We are among the leading producers of natural soda ash in the world and strive to harness the latest technological innovations to better serve our customers. We are proud of employing several generations of reliable, hard-working families over many decades and are determined to maintain a culture of safety as a core value.

The Green River operation has been mining trona for roughly seven decades and today produces more than 4 million short tons (3.63 million metric tons) annually. Genesis Alkali ships approximately 40,000 railcars and 5,000 truck orders of trona each year. And we do it all more efficiently and economically, on a delivered basis, than synthetic competitors anywhere in the world.

**THE WORLD’S LARGEST TRONA MINE**
Fifty million years ago, the land now occupied by our mining facility in Green River, Wyoming, was covered by a landlocked lake. As the Earth changed through the ages, the lake evaporated and left behind 130 billion tons of trona – the world’s largest known deposits.

Today, our mine workers ride elevators down 170 stories – 1,600 feet beneath the surface – to engage in round-the-clock mining operations that include 2,500 miles of tunnels. Our Green River operation has two manufacturing sites – Westvaco and Granger – comprised of seven processing facilities.

**Natural Alkali Products We Supply**
- Dense Soda Ash
- Light Soda Ash
- Sodium Bicarbonate
- Caustic Soda
- S-Carb®
- Sesqui™

**Our Products Are Essential to Everyday Life**
- Flat Glass for Commercial and Residential Windows
- Computer, Flat and Mobile Device Screens
- Bottles and Container Glass
- Solar Glass Panels
- Pharmaceuticals
- Chemical Processing
- Detergents
- Baking
- Cosmetics
- Pulp and Paper Production
- Animal Nutrition
- Personal Care
- Cleaning and Sanitation

**Community Engagement**
We support a range of philanthropic activities focused on health, education and biodiversity. We are committed to serving as a good corporate citizen and valued leader in the community.

**Safety & Sustainability**
Safety is our top priority. We care deeply about our employees, partners, community neighbors and customers, so we routinely conduct safety training at all levels of our business. We are committed to environmental responsibility. Natural soda ash production is substantially less energy intensive and produces fewer harmful pollutants than synthetic methods.
MEET ED FLYNN, PRESIDENT OF GENESIS ALKALI

Edward T. Flynn is president of Genesis Alkali. Prior to joining Genesis, he served for more than two years as president of Tronox Alkali and previously served in various leadership capacities during his 34-year tenure at FMC Corporation. He started with FMC as a process engineer out of college and progressed through multiple assignments and locations, including plant manager, chief information officer, general manager of the Alkali Chemicals Division, president of the Industrial Chemicals Group, and finally president of FMC Minerals.

For nearly seven decades, our Green River, Wyoming, site has been a dependable source of natural soda ash used by manufacturers in the glass, chemical processing, and detergent industries. We offer a reliable supply of a diverse range of high quality products for customers in every corner of the globe.
