## Sodium Bicarbonate: Bagged Product Lot Numbering System

---

Following is a description of the lot numbering system used by Genesis Alkali at its Green River facility for Sodium Bicarbonate. Each container receives a lot number as it is filled. For bags, regardless of size, the lot code is located on at least one side of the bag. The format of the lot code is:

YY-Julian date

Example: **19-037**, packaged on the 37<sup>th</sup> day of 2019 (February 6, 2019)

If the product grade is not pre-printed on the bags, the lot code will also include the grade number; **19-037-#1**, for USP Grade No.1.

The container and/or paper work may have a batch number printed on it. This is an internal Genesis Alkali number used in production and marketing tracking. There is no customer usable information built into it. The Certificate of Analysis (COA) may use the term 'Container Identification' for the corresponding package/product Lot#.

---

Read the product Safety Data Sheet (SDS) prior to using the chemical.
