## **Sodium Bicarbonate: Residual Solvents Statement**

---

Genesis affirms that our Sodium Bicarbonate (all grades) complies with ICH-Q3C and Current USP/NF General Chapter <467> residual solvents guidelines. Class 1, Class 2, or Class 3 solvents listed in the International Committee of Harmonization (ICH) are not a part of our manufacturing process.

The Genesis Alkali QC lab analyzes a representative set of sodium bicarbonate samples to the current USP/NF general chapter <467> residual solvents guidelines. Over the last year of testing, no solvents were detected above the specification limits. While Genesis does not use any of the residual solvents in Class 1, 2, or 3; we do not test for all of the residual solvents in Class 1, 2, and 3.

---

Read the product Safety Data Sheet (SDS) prior to using the chemical.
