

Sodium Carbonate - Lot Numbering of Bagged Product

Thank you for your interest in the lot numbering system used by Genesis Alkali (“Genesis”) for packaged soda ash products. The lot numbering system used for material packaged at Genesis’s Green River, Wyoming facility is explained below. Material packaged elsewhere may follow a different system.

Each container receives a lot number as it is filled. For bags, regardless of size the following system is used:

On Certificates of Analyses (“CoA”):

0216212100B = MMDDYYShiftGrade = Packaged on February 16, 2021;
Second Shift, Grade 100.

On bags:

0216212, MMDDYYShift = Packaged on February 16, 2021, Second Shift.

Note: Since the grade of product is printed on the bag label, it is not repeated in the ink jet printer lot number.

The container or paperwork may include a batch number used internally by Genesis in production and marketing tracking. Such batch number does contain any customer information.

Read the product Safety Data Sheet (SDS) prior to using the chemical.
